(57) **ABSTRACT**

A container for a cryosurgery device which includes a cryogen bottle. The container includes a container body including an internal space sufficiently large to hold the cryogen bottle; a valve actuation assembly mechanically coupled to the container body, the valve actuation assembly configured to actuate a valve on the cryogen bottle; and a reservoir positioned relative to the valve actuation assembly so that the reservoir receives cryogen from the cryogen bottle when the valve on the cryogen bottle is actuated using the valve actuation assembly.
